pleasing and functional kitchen. Colorful photography and personal quotes portray the kitchens within the context of their surrounding rooms, as well as their most important design features.

The 'Water Spaces of the World' series has developed a reputation as the world's ultimate guide to incorporating water into architecture. It is valued for its cooling and calming effect, and this book shows in detail many designs that feature water.

Contains details on domestic extensions, renovations and makeovers and includes plans.

As with the best-selling 'Architects Pocket Book' this title includes everyday information which the architect/designer normally has to find from a wide variety of sources and which is not always easily to hand. Focusing on kitchen design, this book is of use to the student as well as the experienced practitioner. It outlines all the information needed to design a workable kitchen, including ergonomics, services such as water and waste, appliances, and material choices for the floor, walls and ceiling. There is no similar compendium currently available.

Australian cities have traditionally relied for their water on a 'predict-and-provide' philosophy that gives primacy to big engineering solutions. In more recent years privatised water authorities, seeking to maximise consumption and profits, have reinforced the emphasis on increasing supply. Now the cities must cope with the stresses these policies have imposed on the eco-systems from which they harvest water, into which they discharge wastes, and on which they are located. Residents are having to pay more for their water, while the cities themselves are becoming less sustainable. Must we build more dams and desalination plants, or should we be managing the demand for urban water more prudently? This book explores the demand for urban water and how it has changed in response to shifting social mores over the past century. It explains how demand for centralised provision of water might be reshaped to enable the cities to better cope with expected changes in supply as our climate changes. And it discusses the implications of property rights in water for proposals to privatise water services.
