"Fundamentals of Human Physiology" was conceived to meet the needs of students and professors struggling with the complexity and depth of the larger, more detailed human physiology textbooks currently available. In addition to being more concise and focusing on the basics of human physiology, this text is smaller in physical size, allowing for a cheaper, easier choice for instructors.

A Laboratory Guide to Human Physiology, Twelfth Edition, is a stand-alone human physiology manual that can be used in conjunction with any human physiology textbook. It includes a wide variety of exercises that support most areas covered in a human physiology course, allowing instructors the flexibility to choose those exercises best suited to meet their particular instructional goals. Background information that is needed to understand the principles and significance of each exercise is presented in a concise manner, so that little or no support is needed from the lecture text.

The exercises in this manual have been carefully refined and updated to keep pace with changes in laboratory technology, computer-assisted instruction, biohazard health concerns, and vendor supply sources. The manual is self-contained, so that students can prepare for the laboratory exercises and quizzes without having to refer to the textbook.
