Oncological Emergencies The aim of the present edition of the ESMO Handbook of Oncological Emergencies is to approach the new advances and developments in the field of oncological emergency treatments, for the benefit of oncology specialists, but also for those who are just starting out in this profession. Cancer Diagnosis and Treatment Evaluation

---

ESMO Handbooks | Medical Oncology Education  
This 2 day course will cover many of the common oncological emergencies that a patient with a cancer diagnosis may experience.It will cover the incidence, patient groups at risk, diagnosis and initial management of the oncological emergency.The ability to recognise symptoms and alert appropriate health care professionals will also be covered.

---

This new resource on managing oncologic emergencies is directed at all health care professionals who care for patients with cancer or survivors. Edited and written by clinician-experts at The University of Texas MD Anderson Cancer Center, the book covers the full range of oncologic emergencies, from cardiac and neurologic to orthopedic to hematologic, and addresses important palliative care, ethical, and Emergency Department considerations. Chapters are structured with busy clinicians in emergent and urgent settings in mind, and each chapter concludes with a series of key practice points and a list of suggested readings for those who wish to delve deeper into a subject. For any clinician facing the increasing number of patients who experience an oncologic emergency, this is an up-to-date, clinically focused, and authoritative resource.

Thoroughly updated and expanded, the third edition of Understanding and Managing Oncologic Emergencies: A Resource for Nurses is a comprehensive yet practical guide to understanding and managing oncologic emergencies from the nursing perspective.

---

The expanded second edition of this key clinical reference provides the most up-to-date and comprehensive review of oncologic emergencies. It covers the diagnosis and management of the full range of emergencies caused directly by cancer and/or treatment, including chemotoxicity, radiotoxicity and post-surgical complications, as well as transplant-related issues and toxicities of novel antineoplastic agents and the new immunotherapies. The book also shows how the entire spectrum of clinical medicine is brought to bear in the care of cancer patients in the unique setting of the emergency department (ED), from health promotion and prevention, to treatment and palliative care. Recognizing the multiple, overlapping contexts in which emergency care of cancer patients occurs, the book addresses clinically crucial interdisciplinary topics such as the ethics of ED cancer care, analgesic misuse and abuse, informatics, quality improvement and more. Finally, perspectives on care system and social forces that shape ED cancer care, such as cancer care disparities and care models, frame the book as a whole. Edited and written by world-renowned experts in emergency medicine and oncology, the Second Edition of Oncologic Emergency Medicine: Principles and Practice is the definitive resource for emergency physicians, oncologists, internists, family physicians, emergency nurses, nurse practitioners, physician assistants, and policy makers as well as pre and postgraduate trainees.

---

Young medical oncologists, who may often find themselves faced by major complications caused by cancer or by cancer treatment, will welcome this handbook as a highly useful tool to develop their knowledge and skills in the area. Initiated by the European Society for Medical Oncology's (ESMO) Young Medical Oncologists Working Group, this succinct text has been written by a distinguished team of young medical oncologists and senior figures in the field, and is designed to provide oncologists with a secure practical grounding in the correct courses of action to follow in an emergency. The key topics covered include: \* cardiovascular complications \* neurological complications \* renal and urologic complications \* metabolic complications \* respiratory complications \* gastro-intestinal complications \* hematologic complications \* cancer pain.

---

Young medical oncologists often find themselves faced by major complications caused by cancer or cancer treatment. This text gives a secure practical grounding in what course of action to follow in an emergency. Key topics include: Cardiovascular complications, renal complications, hematologic complications and others.

---

This is the first comprehensive clinical reference on cancer emergencies. It is edited and written by world-renowned experts in emergency medicine and oncology and covers the diagnosis and management of the full range of emergencies caused directly by cancer or by its treatment. It shows how the entire spectrum of clinical medicine is brought to bear in the care of cancer patients in the unique setting of the emergency department (ED), from health promotion and prevention, to treatment and palliative care. Recognizing the multiple, overlapping contexts in which emergency care of cancer patients occurs, the book addresses clinically crucial interdisciplinary topics such as the ethics of ED cancer care, the interface with palliative social work, substance abuse, and more. Finally, perspective on care system and social forces that shape ED cancer care, such as cancer care disparities and care models, and on how ED cancer care is delivered outside of the United States, frame the book as a whole. Against the backdrop of rising numbers of cancer patients and survivors as the United States population ages and a forecast shortage of oncologists, this book is designed to serve as the authoritative, single-source clinical reference on cancer emergencies. The intended audience includes emergency physicians, oncologists, internists, family physicians, emergency nurses, nurse practitioners, physician assistants, policy makers as well as pre- and postgraduate trainees.

---

Providing an easily accessible evidence based guide to the diagnosis and management of acutely ill patients with cancer, this book aims to help both the oncology specialist and the non-specialist to optimally manage acutely unwell cancer patients.

---

This issue of Emergency Medicine Clinics edited by Drs. John Perkins and Jonathan Davis focuses on emergencies related to Hematology/Oncology and covers topics such as: Oncologic Mechanical Emergencies, Neutropenic Fever, Oncologic Metabolic Emergencies, Acute Leukemias, Pediatric Oncologic Emergencies, Chemotherapeutic Medications and their Emergent Complications, Anemia, Thrombotic Microangiopathies (TTP, HUS, HELLP), Congenital Bleeding Disorders, Acquired Bleeding Disorders and Antithrombotic agents, Sickle Cell Disease, and more!

---

Holland-Frei Cancer Medicine, Ninth Edition, offers a balanced view of the most current knowledge of cancer science and clinical oncology practice. This all-new edition is the consummate reference source for medical oncologists, radiation oncologists, internists, surgical oncologists, and others who treat cancer patients. A translational perspective throughout, integrating cancer biology with cancer management providing an in depth understanding of the disease An emphasis on multidisciplinary, research-driven patient care to improve outcomes and optimal use of all appropriate therapies Cutting-edge coverage of personalized cancer care, including molecular diagnostics and therapeutics Concise, readable, clinically relevant text with algorithms, guidelines and insight into the use of both conventional and novel drugs Includes free access to the Wiley Digital
