Pro/Engineer Wildfire 4.0 is one of the most widely used CAD/CAM software programs in the world today. Designed for a one or two semester undergraduate course for first or second year engineering students, Pro/engineer Wildfire 4.0 is an extremely beneficial book for both aspiring and newly employed engineers. The text involves creating a new part, an assembly, or drawing, using a set of Pro/E commands, walking you through the process systematically and guiding you through parametric design. While using this text, a student will create individual parts, assemblies, and drawings.

Now in its second edition: the trailblazing introduction and textbook on construction includes a new section on translucent materials and an article on the use of glass.
This book reflects fundamentals to the power system and equips them to recognize and solve the transient problems in power networks and their components. Practicality has been a paramount concern in its preparation. Many pioneers of electrical engineering explored the transient behaviors of electric circuits. This book effectively helpful for the graduate, postgraduate studies and researches on power system transients and emergence & re-emergence the problems in the power system operations and control for new applications with new equipment. I have attempted to set out the fundamental ideas at the beginning of the book and made a consistent effort to show thereafter how one peels away the superficial differences in practical transient studies by referring to various books, researches, and physical industrial visits.

The Finite Element Analysis today is the leading engineer's tool to analyze structures concerning engineering mechanics, i.e. statics, heat flows, eigenvalue problems and many more. Thus, this book wants to provide well-chosen aspects of this method for students of engineering sciences and engineers already established in the job in such a way, that they can apply this knowledge immediately to the solution of practical problems. Over 30 examples along with all input data files on DVD allow a comprehensive practical training of engineering mechanics. Two very powerful FEA programs are provided on DVD, too: Z88, the open source finite elements program for static calculations, as well as Z88Aurora, the very comfortable to use and much more powerful freeware finite elements program which can also be used for non-linear calculations, stationary heat flows and eigenproblems, i.e. natural frequencies. Both are full versions with which arbitrarily big structures can be computed - only limited by your computer memory and your imagination. For Z88 all sources are fully available, so that the reader can study the theoretical aspects in the program code and extend it if necessary. Z88 and Z88Aurora are ready-to-run for Windows and LINUX as well as for Mac OS X. For Android devices there also exists an app called Z88Tina which can be downloaded from Google Play Store.

The CATIA V5-6R2015: Advanced Surface Design student guide expands on the knowledge learned in the CATIA: Introduction to Surface Design student guide by covering advanced curve and surface topics found in the Generative Shape Design Workbench. Topics include: advanced curve construction, advanced swept, blend and offset surface construction, complex fillet creation, and the use of laws. Curve and surface analysis are introduced to validate the student's geometry. Tools and methods for rebuilding geometry are also discussed. As with the CATIA: Introduction to Surface Design student guide, meeting model specifications (such as continuity settings) remains forefront in introducing tools and methodologies. Topics Covered Surface Design Overview Advanced Wireframe Elements Curve Analysis and Repair Swept Surfaces Blend Surfaces Adaptive Sweep Laws Advanced Surface Fillets Alternative Filleting Methods Duplication Tools Knowledge Templates Surface Analysis and Repair Offset Surfaces Project Exercises Prerequisites CATIA V5-6 R2015: Introduction to Surface Design is recommended.
