WILD WELL CONTROL. Well Control Methods. The goal of all well control methods is to safely control the well.

Circulating well control methods are often referred to as "constant bottom hole" methods as they keep BHP equal to FP preventing additional influx fluids. These methods provide for:

- o Removal of kick fluids:
- o Mustkeep BHP = FP to prevent additional kicks.
- o Mustkeep pump running at a constant speed.
- o Pressure is regulated with a choke.

~~WELL CONTROL METHODS~~

Primary well control is the use of drilling fluid density to provide sufficient pressure to prevent the influx of formation fluid into the wellbore. It is of the utmost importance to ensure

open on your desk, on the hood of your truck at the well, or on an offshore platform, this is the only book available that covers the gamut of the formulas and calculations for petroleum engineers that have been compiled over decades. Some of these formulas and calculations have been used for decades, while others are meant to help guide the engineer through some of the more recent breakthroughs in the industry's technology, such as hydraulic fracturing and enhanced oil recovery. There is no other source for these useful formulas and calculations that is this thorough. An instant classic when the first edition was published, the much-improved revision is even better, offering new information not available in the first edition, making it as up-to-date as possible in book form.
