Summary The intent of this paper is to prove that that the damages that are usually associated with earthquakes are actually created by a deficiency in the construction methods used around the world. First, the student will talk about the types of construction failures that contribute to damages in areas where earthquakes hit.

earthquakes, often resulting in tsunami, occur several times each century. The 1923 Tokyo earthquake killed over 140,000 people. More recent major quakes are the 1995 Great Hanshin earthquake and the 2011 Tōhoku earthquake, a 9.0-magnitude quake which hit Japan on March 11, 2011, and triggered a large tsunami.
