In Depth: Voyager 1. NASA's Voyager 1 was launched after Voyager 2, but because of a faster route, it exited the asteroid belt earlier than its twin, having overtaken Voyager 2 on Dec. 15, 1977. It began its Jovian imaging mission in April 1978 when it was about 165 million miles (265 million kilometers) from the planet.

### **In Depth | Voyager 1 - NASA Solar System Exploration**

This is a real-time indicator of Voyager 1's distance from Earth in astronomical units (AU) and either miles (mi) or kilometers (km). Note: Because Earth moves around the sun faster than Voyager 1 is speeding away from the inner solar system, the distance between Earth and the spacecraft actually decreases at certain times of year.

### **Voyager**

Both Voyager 1 and Voyager 2 have reached "Interstellar space" and each continue their unique journey through the Universe. In the NASA Eyes on the Solar System app, you can see the real spacecraft trajectories of the Voyagers, which are updated every five minutes. Distance and velocities are updated in real-time.
