Night sky photography entails working in darkness and often in cold conditions. You'll avoid grief by setting up your gear before the sun goes down. Likewise, running down a checklist will save you from suffering through a dead battery midway through a star-trail sequence, discovering you left your ISO at 25,600, or lamenting the hat left behind on an icy evening.

## **Photography Night Sky: Shooting the Milky Way — The ...**

I do a lot of my night sky photography this way. However, those setups are mostly for shooting wide-field views of the sky because of the Earth's rotation. The rotation of the Earth is what makes the stars appear to move across the sky nightly. This is what causes stars to streak and trail if you use a long exposure to shoot the sky.

Taking pictures of the night sky. You won't get good star shots if there's much ambient light, so travel as far as you need to a dark, remote spot. The place doesn't have to be an open field — a scene that includes mountains or tall trees can add interest to a night-sky shot.

## **Photographing the Night Sky Using Your Digital SLR - dummies**

Night sky photography requires comparatively little equipment compared to other photographic media. The essential tools are: A camera (either SLR camera or DSLR camera—which is the digital camera version of an SLR). One or more lenses that can handle low light and long exposures

(ideally one of these will be a wide angle lens).

## **How to Take Night Sky Photos: Guide to Night Sky Photography**

Shooting time-lapse sequences is similar to shooting a single image in that exposure is based on the shooting conditions. For time-lapse photography of the stars in the night sky, use an aperture of about f/5.6 if the moon is full, f/2.8 if the moon is not full. In manual exposure mode, shoot a test shot at 10 seconds.

## **Photographing the Night Sky | Nikon**

Night sky photography might call for a longer shutter speed of 10 seconds or more, while for urban night photography you can probably use a 2-10-second shutter speed. It all depends on the amount of available light, and the effect you're going for. You know those star trail night sky images?
